## 8 INSTRUCTION UPON USAGE

Operation	Precautions
<p><b>FPC/FFC Termination procedure.</b>  <b>Connector installed on the board.</b></p> <p>1) Lift up the actuator. Use thumb or index finger.</p>  <p>2) Do with the actuator opened completely, and insert it in the interior of the insertion entrance surely when you insert FPC/FFC. There are some insertion resistance because this connector has the FPC/FFC temporary retention mechanism.</p>  <p>3) Rotate down the actuator until firmly closed. It is critical that the inserted FPC/FFC is not moved and remains fully inserted. Should the FPC/FFC be moved, open the actuator and repeat the process, starting with Step 1 above.</p>  <p><b>FPC/FFC Removal</b></p> <p>1) Lift up the actuator.</p> <p>2) Carefully remove the FPC/FFC.</p> 	<p>1) Do when you pull out mating FPC/FFC with the Actuator opened completely. Confirm whether to Have adhered to the terminal contact part before FPC/FFC is mated with the connector housing when the opening of the actuator is the un-complete and FPC/FFC is pulled out.</p>  <p>2) Do not add the load mating FPC/FFC with connector housing.</p>  <p>3) Due to the structure of the connectors, they do not have string resistance to upward pulling; therefore, support the FPC/FFC when a pulling force is applied to it.</p>
