6 INFRARED REFLOW CONDITION

7 RECOMMENDED P.C.B. LAYOUT

There shall be no inner-layer conductors of any kind, including ground or power planes, beneath the edge fingers (for a distance of 25 mils?). Any conductors in this region increase capacitance with respect to the high-speed signal lines, which degrades insertion loss and increases return loss.

Inner plane layers may be added beneath the edge fingers if they extend no more than 2 mm into the edge finger region from the main routing area of the board and are at a depth of least 15 mil (0.38 mm) beneath the edge finger copper pads on the surface of the PCB.
